Getting You Back in the Game

Whether you are a high school athlete or weekend warrior, you may experience a sports-related injury or condition due to trauma, such as a sprain or fracture on the field or court, or to chronic overuse, such as golfer's elbow. Your injury requires prompt evaluation and treatment so that you can quickly and safely return to the activities you enjoy.

Dr. Andrew Markwith is a fellowship-trained orthopedic surgeon specializing in sports medicine. He provides customized care ranging from conservative approaches like physical therapy and medication to the latest advances in surgical treatment and minimally invasive procedures for a full range of common athletic injuries and conditions including:

- Patellar instability
- Cartilage defects
- ACL (anterior cruciate ligament) injuries or tears
- Concussions
- Dislocation or separation
- Fractures
- Joint instability
- Meniscus tears
- Overuse injuries
- Rotator cuff tears
- Sprains or strains
- Tendon tears
- Tennis and golfer's elbow

Same or next day MRI is available if required for imaging. For high school and college athletes, Dr. Markwith's team will keep your trainer updated regarding your progress at your request for medical clearance and is available to your trainer by text.
